

I am urging the FCC to observe the effects of BPL on radio services in the HF and lower VHF ranges. The ARRL labs have submitted clear evidence of harmful interference potential to the amateur service from BPL signals. Implementation of BPL will effectively eliminate the ability to hear weak, even moderately strong, HF signals in areas where it is deployed. Other radio services in the HF frequency range will likewise be effected. International broadcast, utility, possibly HF aircraft signals will experience harmful interference from BPL if it is allowed to go forward.

Pull the plug on BPL now.

Richie Allen, amateur licensee KC5NZR
